Robotic Accuracy

How to get the most out of your treatment

- Avoid foods that could accidentally knock off or damage your brackets, including things like hard chips or sticky sweets. The accuracy of suresmile treatment relies on the position of your brackets, so replacing brackets can add extra time to your treatment. If you break off several brackets, your orthodontist might even have to take another scan of your teeth to capture the new bracket positions.
- Don't miss your scheduled appointment. A missed appointment can add a month or more to your treatment time.
- Use a fluoride rinse as recommended by your orthodontist. This will help to keep teeth healthy and possibly prevent decalcification (white spots on your teeth) when your brackets are removed.

suresmile®

to be sure.
